

# Colour-Mixed Hand Prints

## Materials:

- 2 primary colour paints
- paper plates
- white paper

## Procedure:

Put two primary colours such as red and yellow, on the plate. Next, have the student put their hand in the red paint, then make a hand print. Next, have the student put their other hand in the yellow paint and make a hand print. Then, have students rub their hands together with the paint still on them and see what colour they have made. Then they will make a hand print with the orange paint on their hands they have just made. This will show them that red and yellow make orange!

Try with other colours.
