

HOLIDAYS IN SPACE

With the help of a special spaceship that can travel at the speed of light—300 000 kilometres per second—your tour company is able to take people on tours through the solar system.

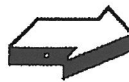

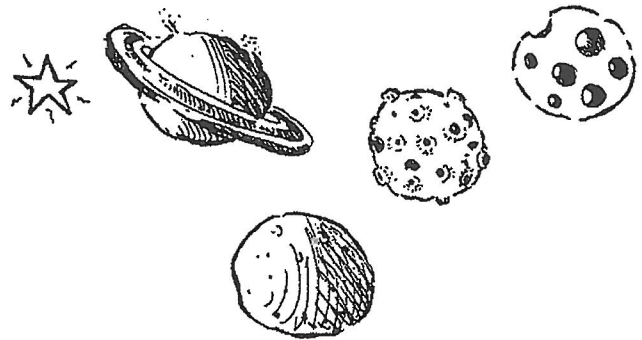

Design a holiday package that takes visitors to the Sun and then to three planets of their choice before heading back to Earth. You will need to calculate arrival and departure times and provide a brief tour description. All the information you need to design the itinerary is included in *Out of Space*. You can use a calculator to help you.

Leave Earth at _____

Arrive Sun at _____

Tour description _____

Depart Sun at _____

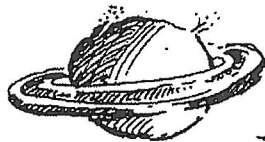

Arrive _____
